---

## BACKGROUND

---

The Kansas Core Outcomes Project was initiated in 1999 by the Kansas Council of Instructional Administrators (KCIA), a group comprised of the chief academic officers of the state's community colleges and vocational-technical schools/colleges. The goal of this project was to develop core outcomes and competencies for general education courses at the state's colleges and universities.

The first meeting for the project was held in fall 1999 at the Southside Educational Center in Wichita. Faculty were invited to that meeting from the state's 19 public community colleges, six Regents' universities, and Washburn University. Six disciplines were represented: Biology, Computer Science, English, Mathematics, Sociology, and Speech. A second meeting, in spring 2000, was conducted at Emporia State University, and three additional disciplines—Chemistry, History, and Psychology—were added to that initial group of six. A third meeting, again at Southside, was conducted in January 2001. Another meeting of the core competency groups was held in September of 2002. Subsequently, disciplines such as English, Mathematics, and Speech have scheduled other, independent meetings.

The Core Competency meetings were originally financed through the KCIA budget. Each institution made a commitment to its faculty and supplied them with finances for lunch and travel. Due to increased budget decreases and the time commitment for our faculty, it was decided that future meetings would be held annually in the fall semester. In 2005 and 2006, additional Core Competency meetings occurred, and reports have been filed with the Kansas Board of Regents.

At its retreat in the summer of 2007, the KCIA members decided that the project needed a comprehensive list of courses that have been evaluated in each area, a standard format for reporting of the reviews and outcomes, as well as minutes. Therefore, this report follows a standard format for each discipline even though some information, such as course titles, may be missing. The annual reports are posted to the Kansas Board of Regents' website. Each report contains the most recent review of the outcomes for the courses listed at each academic institution.

175 individuals from 35 institutions participated in the October 14th, 2011 meeting on KU's Lawrence campus. Gary Alexander and Joan Warren from the Kansas Board of Regents opened the meeting with a conversation about the importance of the Core Outcomes project and anticipated future changes in the structure and role of meetings. Kansas State University is scheduled to host the Core Outcomes meeting in 2012 and 2013.

**Comments:**

## **Core Outcomes:**

Students will be expected to use appropriate technology as one tool to achieve the following outcomes:

### Arithmetic and Algebraic Manipulation

- Evaluate arithmetic expressions, including absolute value, using the order of operations and properties of real numbers.
- Evaluate algebraic expressions.
- Apply the laws of exponents to simplify expressions containing integer exponents.
- Express numbers in scientific notation.
- Perform addition, subtraction, multiplication, and division on polynomial expressions.
- Factor expressions with common factors, expressions that require grouping, trinomial expressions, and differences of squares.
- Perform addition, subtraction, multiplication, and division on rational expressions.
- Evaluate radicals, approximating those that are irrational.
- Simplify numeric radicals using the product and quotient rules.

### Equations and Inequalities

- Solve linear equations in one variable.
- Solve proportional equations.
- Solve linear inequalities in one variable, showing solutions on the real number line.
- Solve literal equations that do not require factoring.
- Solve quadratic equations by factoring.
- Develop and solve mathematical models including number, geometry, and percentage applications.

### Graphs on a Coordinate Plane

- Plot points correctly on a coordinate plane.
- Graph linear equations by plotting points.
- Graph linear equations by using intercepts.
- Graph linear equations using the y-intercept and slope.

### Analysis of Equations and Graphs

- Identify the x-intercept, y-intercept, and slope of a line, given its graph.
- Identify the x-intercept, y-intercept, and slope of a line, given its equation.
- Determine the equation of a line, given its graph, its slope and y-intercept, or its slope and a point on the line.
- Determine equations of both horizontal and vertical lines.
- Determine whether or not an equation is linear.
- Calculate the slope of a line passing through two given points.

**Comments:**

**Core Outcomes:**

Students will be expected to use appropriate technology as one tool to achieve the following outcomes:

Analysis and Graphing of Functions and Equations

- Use functional notation.
- Recognize and distinguish between functions and relations (equations).
- Use concepts of symmetry, intercepts, left- and right-hand behavior, asymptotes, and transformations to sketch the graph of various types of functions (constant, linear, quadratic,

absolute value, piecewise-defined, square root, cubic, polynomial, rational, exponential, and logarithmic) or relations (circle) given in description.

- Determine the domain and range of a function.
- Write the equation that describes a function (for types given above) or circle given its description.
- Use graphs of functions for analysis.
- Find arithmetic combinations and composites of functions.
- Find the inverse of a function.

#### Solutions of Equations and Inequalities

- Solve equations listed in the third bullet above, i.e., literal equations, quadratic equations by factoring and the quadratic formula, equations involving rational expressions, equations involving radicals, and equations involving absolute value expressions, along with equations involving exponential or logarithmic functions.
- Solve inequalities of the following types: linear (in one and two variables), polynomial, rational, absolute value.
- Solve systems of inequalities by graphing.
- Apply equations from the first bullet in this core outcome to real-world situations, including but not limited to depreciation, growth and decay, and max/min problems.
- Examine and analyze data, make predictions/interpretations, and do basic modeling.
- Solve systems of equations by various methods, including matrices.

**Comments:****Core Outcomes:**

It is assumed that students entering an Intermediate Algebra course will have competencies from prerequisite courses. Students will be expected to use appropriate technology as one tool to achieve the following outcomes:

Arithmetic and Algebraic Manipulation

- Factor quadratic expressions, expressions of quadratic form, special forms, and factor by grouping.
- Perform addition, subtraction, multiplication, and division on rational expressions.
- Simplify complex fractions.
- Apply the laws of exponents to simplify expressions containing rational exponents.
- Apply the laws of radicals to perform addition, subtraction, and multiplication on expressions involving radicals. Rationalize denominators containing radicals.
- Simplify radicals containing negative radicands. Perform arithmetic operations on complex numbers.
- Evaluate functions using function notation.

Equations and Inequalities

- Solve linear inequalities in one variable showing solutions both on the real number line and in interval notation.
- Solve literal equations, including those that require factoring.
- Solve systems of linear equations in two variables.
- Solve equations by factoring and quadratic formula.
- Solve equations containing rational expressions.
- Solve equations involving radicals.
- Solve linear absolute value equations and inequalities in one variable.
- Develop and solve mathematical models including variation, mixture, motion, work, and geometrical applications.

Graphs on a Coordinate Plane

- Graph linear inequalities.
- Graph quadratic functions.

Analysis of Equations and Graphs

- Determine an equation of a line given either sufficient information (two points) or a particular condition (perpendicular to a given line, parallel to a given line through a specific point, through a specific point with a given slope, etc.).
- Calculate the distance between two points.
- Distinguish between functions and relations using the Vertical Line Test.
- Identify the domain and range of a function given its graph.

| Trigonometry       | MA 117        | 3       | Washburn                 |
| Trigonometry       | MATH 123      | 3       | Wichita State University |

**Comments:**

**Core Competencies:**

It is assumed that students entering a Trigonometry course will have competencies from previous courses. Students will be expected to use appropriate technology as one tool to achieve competency in this course. The student will:

1. Understand the basic definitions of trigonometric functions using both a right triangle and the unit circle.
2. Solve right triangles, and know trigonometric function values for special angles.
3. Understand radian definition and measurement, and understand circular functions as real-valued functions.

4. Analyze the graphs of the six basic trigonometric functions and their arithmetic combinations using the concepts of period, phase shift, amplitude, and displacement.
5. Derive/verify trigonometric identities, including but not limited to double angle, half angle, angle sum and angle difference identities.
6. Define, graph, and analyze inverse trigonometric functions.
7. Solve equations involving trigonometric functions.
8. Find solutions of oblique triangles using the Law of Cosines or Law of Sines.
9. Solve applications, including but not limited to vectors.

**Discipline:** Mathematics

**General Course Title:** Calculus I

**Date Developed (and any modification):** September 14, 2007; modified September 12, 2008

**Courses from Each Participating College/University for which Core Outcomes Apply:**

| Course Title                       | Course Number | Credit Hours | Institution           |
|------------------------------------|---------------|--------------|-----------------------|
| Calculus with Analytic Geometry I  | MAT 123       | 5            | Allen County CC       |
| Analytic Geometry and Calculus I   | MATH 1832     | 5            | Barton County CC      |

## Comments:

## Core Outcomes:

(Content Outline and Competencies for Engineering Calculus I)

### Using Limits

- Evaluation of Limits
  - Evaluate the limit of a function at a point both algebraically and graphically.
  - Evaluate the limit of a function at infinity both algebraically and graphically.
  - Use the definition of a limit to verify a value for the limit of a function.
- Use of Limits
  - Use the limit to determine the continuity of a function.
  - Apply the Intermediate-Value Theorem.
  - Use the limit to determine differentiability of a function.
- Limiting Process
  - Use the limiting process to find the derivative of a function.

### Finding Derivatives

- Find derivatives involving powers, exponents, and sums.
- Find derivatives involving products and quotients.
- Find derivatives involving the chain rule.
- Find derivatives involving exponential, logarithmic, and trigonometric functions.
- Find derivatives involving hyperbolic and inverse trigonometric functions.\*
- Find derivatives involving implicit differentiation.
- Use the derivative to find velocity, acceleration, and other rates of change.
- Use the derivative to find the equation of a line tangent to a curve at a given point.

### Using Derivatives

- Curve Sketching
  - Use the first derivative to find critical points.
  - Apply the Mean-Value Theorem for derivatives.
  - Determine the behavior of a function using the first derivative.
  - Use the second derivative to find inflection points.
  - Determine the concavity of a function using the second derivative.
  - Sketch the graph of the function using information gathered from the first and second derivatives.
  - Interpret graphs of functions.
- Applications of Derivatives
  - Use optimization techniques in areas such as economics, the life sciences, the physical sciences, and geometry.
  - Solve related rates problems.
  - Use Newton's Method.
  - Use differentials to estimate change.
  - Find limits using L'Hopital's Rule.\*

### Finding Integrals

- Find area using Riemann sums and integrals.
- Express the limit of a Riemann sum as a definite integral.
- Evaluate the definite integral using geometry.
- Integrate algebraic, exponential,\* and trigonometric functions.
- Evaluate definite integrals using the Fundamental Theorem of Calculus.
- Apply the Mean-Value Theorem for integrals.
- Integrate indefinite integrals.
- Integrate using substitution.
- Integrate using numerical techniques.
- Integrate using integration by parts and trigonometric substitutions\*
- Evaluate improper integrals\*

### Using the Integral

- Solve a differential equation by separation of variables.\*
- Solve initial value problems.\*
- Solve applications of exponential increase and decrease.\*
- Compute areas and volumes using shell and disk methods; compute arc lengths and the average value of a function.\*
- Applications to physics, engineering, and geometry (solid figures).\*

\*Some Regents Universities require these topics for admission to Calculus II.

### **Comments:**

(The following statement was composed by Dr. Jack Porter of the University of Kansas and Prof. Jeff Frost of Johnson County Community College. Although the group agreed that such a statement should be inserted into the standards, the text of the statement was not voted on by the group. )

*Kansas Public College and University mathematics professors believe that a strong foundation in the concepts of calculus will lead to success in careers that have a strong emphasis in critical thinking, such as engineering, computer science, or biotechnology. However, this will not happen if calculus is taught at primarily a skills and formula level without sufficient time to engage students in the deeper, conceptual tenets of calculus. All calculus teachers have an obligation to the mathematics community to ensure that students completing a first-semester, mainstream calculus course understand the material in a rigorous fashion at the level required to pass the AP Calculus examinations AB and BC.*

*In addition to the core outcomes for Calculus I agreed upon at the Wichita meetings (September 2008), a few schools believe that a first course in calculus with a longer list of competencies will better prepare students who are working toward degrees in math-related fields. Specifically, the University of Kansas and Johnson County Community College have course outlines that cover additional topics beyond the core competencies. Because of these additional topics, students attempting to transfer into one of these colleges may find the need to take additional calculus courses.*

## Comments:

## Core Outcomes:

Students will be expected to use appropriate technology as one tool to achieve the following outcomes:

### Basic Descriptive Statistics: Organizing and Describing Data

- For a given set of data, draw a dotplot, histogram, stem-and-leaf diagram, and a boxplot.
- Describe the general shape of data, skewed left, skewed right, normal, or other symmetric.
- Calculate the measures of central tendency including mean, median, and mode.
- Calculate the measures of dispersion including range, standard deviation, and interquartile range; explain the meaning of dispersion as it relates to a problem.
- Use a statistical package on a graphics calculator or a computer to enter data and analyze results.

### Introduction to Probability: Finding the Theoretical Probability of an Event

- Use probability notation including the “or” condition and the “and” condition.
- Determine whether or not two events are mutually exclusive.
- Determine whether or not two events are independent.
- Calculate conditional probabilities; explain the meaning of conditional probabilities; use conditional notation.

### Random Variables: Determining Probabilities of a Random Variable

- Determine the expected value and the standard deviation of a discrete random variable.
- Determine probabilities for a discrete random variable.

### Special Probability Functions: Using Functions to Solve Probabilities of Events

- Use the binomial formula to solve probability problems with two outcomes and independent events.
- Use the normal distribution to solve percent problems for normally distributed populations.
- Use the normal distribution to solve probability problems for normally distributed random variables.

### Random Sampling and Sampling Theory: Generating Distributions for Sample Means

- Calculate the mean for a distribution of sample means.
- Calculate the standard deviation for a distribution of sample means.
- Perform a normal probability plot; describe the shape of the population distribution based on the plot.
- Analyze the Central Limit Theorem.

### Estimating the Mean: Using Statistics to Determine Averages of a Population

- Construct confidence interval for a population mean with known population standard deviation; explain the meaning in terms of the problem.
- Construct a confidence interval for a population mean with unknown population standard deviation; explain the meaning in terms of the problem.
- Construct a confidence interval for a population proportion; explain the meaning in terms of the problem.

### Hypothesis Tests: Finding Significance

- Perform a hypothesis test for a sample mean with known population standard deviation.
- Perform a hypothesis test for a sample mean with unknown population standard deviation.
- Perform a hypothesis test for a sample proportion.
- Perform a hypothesis test with more than two categories for procedures using the chi-square distribution (optional).
- Explain Type I and Type II errors with respect to a problem (optional).
- Calculate the P-value of a hypothesis test; explain the meaning in terms of the problem.

### Linear Regression: Making Predictions with Linear Data

- Calculate a linear regression equation; explain the meaning in terms of the problem.
- Use a linear regression equation to make predictions about data.
- Calculate the coefficient of determination for a linear regression equation; use the coefficient of determination to explain the strength of the regression equation.

## **Mathematics Minutes**

**Discipline:** Mathematics

**Date:** 10/14/11

**Facilitator:** Jeff Frost, Johnson County Community College

**Colleges present:**

Allen County Community College  
Barton County Community College  
Butler County Community College  
Cloud County Community College  
Coffeyville Community College  
Cowley County Community College  
Dodge City Community College  
Emporia State University  
Fort Hays State University  
Fort Scott Community College  
Highland Community College  
Johnson County Community College  
Kansas City Kansas Community College  
Kansas State University  
Labette Community College  
Manhattan Area Technical College  
Neosho County Community College  
Pittsburg State University  
University of Kansas  
Wichita Area Technical College  
Wichita State University

### Meeting notes:

The meeting began with a discussion of developing a common math for liberal arts class. DeeAnn VanLuyck, instructor at Fort Scott Community College, gave a brief report regarding the progress of the liberal arts math course sub-committee and provided a handout. At this point, the subcommittee has collected several syllabi and has begun to write competencies. (Please email DeeAnn VanLuyck ([deeannv@fortscott.edu](mailto:deeannv@fortscott.edu)) if you are interested in joining the sub-committee working to develop this course.)

Individuals who have expressed an interest in this group include:

Next Nathan Stanley, instructor at Neosho Community College, presented information about the Transfer and Articulation Advisory Council, which was formed by KBOR. Nathan explained the purview of the committee which includes three goals:

- Identify General Education Core courses that could transfer anywhere in Kansas (by January 2012)
- Approve common course outcomes for as many Core Courses as possible (by June 2012)
- Approve common course outcomes for remaining Core Courses (by December 2012)

#### **Core Outcomes:**

College Algebra Core Outcomes, implemented in the fall of 2004, should be continued in their present form. No changes are recommended at this time.

#### **Committee Recommendations:**

After discussion, the math core outcomes group agreed that College Algebra should be designated as a General Education Core Course; core outcomes for that course have been in place since 2004. Group consensus was that the current core outcomes for College Algebra remain in place.

Of greater concern to the group was how to effectively implement and monitor the Core Outcomes for online offerings of College Algebra. The remainder of the meeting was devoted to a discussion of the quality of online College Algebra classes around the state.

The group suggested that a task force be created to recommend best practices for maintaining rigorous standards of online College Algebra course offerings. Suggested topics could include:

- Utilizing technology that requires authentication so that the person taking the course is the same person who completes assessments
- Requiring exams to be a significant part of the course grade
- Implementing multiple methods of assessment
- Requiring proctored exams
- Implementing minimum standards for passing the course, such as a minimum score on a final exam

Additional discussion centered on student success rates in online math classes. The group generally agreed that data showed students in online math courses were less likely to pass than their peers in face-to-face or hybrid math courses. The group recommended that additional studies be implemented to determine characteristics of students most and least likely to succeed in online College Algebra classes.
